C^4 Columbus Area Career Connection
2016 - 2017 One-Year Follow-Up Study

The local One-Year Follow-Up Study of the class of 2016-2017 reports the status of **374 of the 374** exiting seniors who completed C^4 programming their senior year of high school. This **100 percent return,** the highest return for the second consecutive year in the history of this study, confirms that the findings in this study present a reliable and accurate status of each student. The findings, as detailed in this document, confirm the effectiveness of the education C^4 provides each student in that they completed their C^4 class, graduated from high school, continued their education and secured a higher wage from training-related employment.

C^4 continues to meet the challenge of completing two follow-up studies involving two different sets of students. This local C^4 study cohort includes a graduating class of students who were enrolled in a multiple-hour C^4 Career & Technical Education (CTE) class or Project Lead the Way (PLTW) classes during their senior year, thus showing the impact teachers, staff and programming have on C^4 student success. By contrast, the State study includes the senior class of students who took at least six credits in CTE during the course of high school, not necessarily during their senior year and not all CTE credits necessarily from C^4 or the Area CTE District (District #41).

It came as no surprise that contacting students was once again a challenge; however, having student mobile numbers made a positive difference. While accurate and reliable, some information came from family members, teachers or social media, leaving some information unavailable such as satisfaction with C^4 and hourly wages earned. In comparing this information with previous years, the variance is insignificant to the results. There has always been reluctance in reporting wages, and that continues to hold true. One could deduce that satisfaction, while very abstract, could come from the connection between training related figures for employment and education. Overall, **95.2 percent** of the C^4 Class of 2017 was employed or enrolled in continued education, with **71.6 percent related to the training they received from C^4** which could infer satisfaction, and certainly supports the effectiveness of C^4 education.

Our vision states that "C^4 will connect community resources to provide career education for all students while laying the foundation for life-long learning." The results of this study are found to be highly reflective of the total class, due to the 100 percent return rate.

C^4 has chosen to view follow-up statistics by Clusters, which are areas of Career and Technical Education leading to various pathways. This view provides a more focused perspective and promotes program improvement through teams developed to deliver connected occupational training. Clusters will compile trend data to enable teams to set goals for improvement and monitor achievement.

A new look to this study includes comparison breakdown of the data to expose trends. Looking at long term data, the 10-year comparison shows overall trends over the past 10 years. The yearly breakdown of data showing results of the class of 2017 for BCSC graduates and County graduates. Finally, the comparison of BCSC data and County data over a four-year period shows yet another view of trends in the data collected to provide a better tool for reviewing C^4's success with students as they exit high school.

These comparison views, along with the individual overall cluster information and County data by schools provides trending data information for all stakeholders.

7/2018

Closing Comments:

Each year that a C[4] Follow-Up Study is completed, it is interesting to watch the statistics unfold to tell the C[4] story for that class of students who are continuing their journey after high school. It is equally fascinating to review the trends through comparison data. This is the tenth year for the C[4] Follow-Up Study to look at those students who were not engaged in employment, continued education, military service or stay-at-home parents.

This study found that eighteen **(18) of the 374 (4.8 percent)** students contacted were not engaged. This means that **95.2 percent (356)** of the students who completed C[4] programs during the 2016-17 school year **were either competitively employed, pursuing higher education, raising their children as stay-at-home parents or enlisted in military service after high school**.

It is significant to note the diplomas received by these students. Of those eighteen respondents, eight (57.1 percent) earned a certificate or general diploma, five (35.7 percent) earned Core 40 and one (7.2 percent) earned a Technical Honors Diploma. A potential explanation for some of these students could be that being a member of Generation Z, they may find themselves wanting more than just a *job*. They may be looking for a sense of fulfillment and excitement in employment that will help them to move forward in the world. They could be utilizing technology to search for just the right position and have not yet found it. They seem to have no sense of urgency and are often content to take their time for the right position to find them.

C[4] learned that **89.4 percent of the graduates from the class of 2017 were using their C[4] education in their current positive placements.**

Area 41: Participating School Information

A breakdown of Follow-Up information from Area District # 41 Schools can be found on **Pages 24 to 27.** It is remarkable that among Area District #41 CTE students **92.4 percent** were either **competitively employed, pursuing higher education or enlisted in military service after high school**.
Recommendations

Viewing these statistics by Cluster will benefit C[4] in its review of the results.
1. Cluster and professional development meetings will analyze the information appropriate to each program area of study.
2. Staff will identify positive results and share best practices contributing to those results.
3. Best practices will then be shared with all staff for program improvement.
4. Staff will identify areas of concern and brainstorm strategies for improvement.
5. Strategies will be shared with all staff.
